Solutions

Our Solutions

Our experience shapes our solutions, creating teams that work by working together whether they're in the room or on the other side of the world. From fully connected Boardrooms and Lecture Theatres, to agile Hybrid Meeting Spaces ready for everyone to Bring Their Own Device, our Audio-Visual solutions can be fully integrated with Smart Building Management Systems and controlled remotely.

Visit our website to find out more about the workplace environments in which we install innovative Audio Visual solutions.

World-class Audio-Visual Solutions that enhance communication and company collaboration.

About Carillion Communications

The accomplished Carillion Communications team has years of experience designing, building and managing highly advanced Audio-Visual solutions that enhance our client's abilities to connect, communicate and collaborate.

We deliver the full scope of technical support, from small upgrades to augment conferencing system functionality to crafting bespoke set-ups for complex organisational infrastructures.

History

Our business has been leading the Audio-Visual market since 1993. As we've grown over the last three decades, Carillion Communications has embraced the opportunities that technological progress offers to bring us closer together.

From early-stage Audio-Visual video conferencing to today's integrated smart buildings, dynamic hybrid meeting spaces and one-click BYOD systems, we're excited to show you the possibilities to help your workforce work smarter, not harder!

Our Differences

When you work with Carillion Communications, you gain a trusted partner skilled in the potential for Audio-Visual solutions to produce tangible pathways to achieve your aspirations.

From the very beginning of each project, we start with a thorough consultation. During this period we invest time and resource to understand your objectives and thoroughly identify your pain points and then we make tailored recommendations to surpass your expectations.

Hybrid Meeting Workplaces

Putting the user experience first with our hybrid workplaces.

As technology continues to evolve, we've entered an era where work is no longer refined to a specific desk, phone, or computer screen. With an effective Hybrid space, the lines are intentionally blurred between physical and virtual working environments with digital information-communication networks enhancing team performance and allowing for a level of collaboration never seen before. Our Hybrid spaces enhance productivity, reduce costs, environmental impact and strengthen performance and put the user experience first.

Meeting Room Audio-Visual

The demands of a modern meeting room have evolved in recent years.

In fact, meetings no longer take place in just one room, emphasising the need for seamless interconnectivity and clearer communication between participants. Whilst the technological needs have changed, the fact remains that a meeting room is where ideas are born, relationships are formed and

deals are secured. With that in mind, we provide professional meeting room AV solutions to optimise your meeting room experience and facilitate the modern needs of a meeting – from design and installation to maintenance and support services.

“Carillion shone through. They suggested how we could keep some of our current infrastructure to accommodate the planned changes”

Julian Beckles Fine and Rare

Remote Monitoring

Your Audio-Visual network is always operational, even when you're not in the room. Today, if a performance-related issue develops it's typically called into the helpdesk and sometimes this may not happen until the next room booking takes place when the issue is discovered. This delay could seriously result in a loss of facility availability and can add additional

pressure to the meeting organiser and participants. Our remote AV monitoring service provides an elegant solution, allowing a Helpdesk Engineer to access network monitoring functions from our control room completely remotely, giving you peace of mind that any issue can be mitigated quickly.

Inclusive Workplace Integration through Accessible Technology

A culture of inclusivity is a considerable asset for any business. Technology has the power to provide complete accessibility, making the workplace an efficient, welcoming, and ultimately usable environment for all staff, visitors and associates. As established experts in exceptional Audio-Visual solutions, Carillion Communications works with a vast range of clients to upgrade, enhance and upskill their workplaces to meet the demands of their valued teams no matter who they are. We believe that workplaces should provide all the resources necessary for inclusivity.

“Our relationship with Carillion has grown over the years; we’ve come to view them as a trusted partner.”

Bring Your Own Device Technology

Bring Your Own Device, or BYOD, is increasingly popular, allowing colleagues and associates the convenience to manage their meetings, with all the resources they need available on familiar devices.

BYOM puts the power back into the hands of your people who decide where and how they connect with meeting participants in order to create a seamless user experience with an easy setup. Carillion Communications delivers professional BYOD solutions, facilitating streamlined communications from any device, in any workplace, with full integrations for seamless connectivity.

“Carillion staff are proactive and strategic in their approach, which is one of the reasons they have been our AV partner of choice for more than six years”

Denver Diedericks CVC Capital Partners

A man with a beard, wearing a white shirt, is shown in profile, looking intently at a large screen in a control room. The screen displays various data points and graphs. The room is dimly lit, with the primary light source being the screen. There are decorative curved shapes in teal and orange on the left side of the image.

Audio-Visual solutions are crucial for the successful operation of control rooms.

Control Rooms

The modern AV control room is often the heart of your businesses AV facilities, enabling building-wide management of all AV solutions. Audio-Visual solutions are crucial for control rooms, providing systems monitoring and precise information delivery for fast decision-making in environments such as emergency services and high-risk industries.

Carillion Communications is a control room integration specialist installing interfaces that automate your AV system and the room environment. We design and implement control room technologies such as video walls, remote monitoring software, live video capture and building access management (BAM). Our focus is always on designing the optimal control room to enable your workforce to respond quickly and gain instant clarity about the scenario at hand.

Putting the user experience first
with our hybrid workplaces.

AV Rentals

From conferences to awards ceremonies, parties to business-critical meetings, the performance of your Audio-Visual equipment can transform an event into a powerful experience for all participants. Carillion Communications works with a considerable range of clients looking for exceptional quality Audio-Visual solution hire, with comprehensive support throughout their event. Our experienced engineers can also remain on-site throughout your event for seamless project management, including installation, training and removal at your convenience.

Smart AV Building Integration

Smart buildings offer an opportunity to incorporate outstanding Audio-Visual into every touchpoint, making connectivity a driving force behind your workplace design and functionality. Carillion Communications innovative engineers work with a range of businesses, from small start-ups to global corporate enterprises looking to enhance how their buildings perform. Dynamic Building Management Systems (DBMS) provide control at your fingertips, handling everything from security systems to temperature, lighting, to keyless entry. These intelligent systems are also exceptional for busy organisations, combining wayfinding and room bookings for streamlined workforce management.

“The new screens are brighter and better colour calibrated, and they are so much easier for my team to maintain.”
